

# ... and ONLY Sunrader.

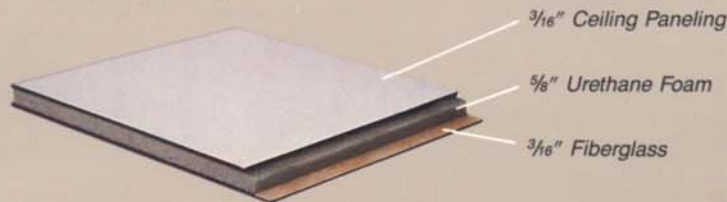

"A Patented Design That Is Superior"

FLOOR CUT-AWAY

CEILING CUT-AWAY

Sunrader is the only motorhome on the market today with this patented molded fiberglass design. 13 years of manufacturing experience has produced this unique reinforced fiberglass body (1974 U.S. Design Patent D238,353).

After the two component halves are formed, they are overlapped, screwed and fiberglassed together to form a solid "one-piece" unit.

The roof construction consists of 3/16" molded fiberglass with urethane foam and plywood. These materials are bonded together to form a seamless roof structure.

The floor and wheel wells are fiberglassed into the lower body, which increases the overall strength and forms a unibody construction.

As the floor cut-away displays, a ridged base is formed by the lamination of 3/4" polystyrene foam and plywood along with an underside of weather-resistant aluminum.

The maintenance-free exterior of your new Sunrader also provides a sleek, aerodynamic form to provide better fuel economy. In years to come you will also notice that there is no delamination as with inferior products. You are purchasing an investment value that is Sunrader . . . and ONLY Sunrader.
